**Actual Costing With The Sap**
2. Actual costing. Actual costing generates a material ledger document for all goods movements at the standard price (preliminary valuation). At period-end, an actual price is calculated for each material based on the actual costs of the period. This actual price is called the periodic unit price and can be used for the following at period-end:

On the other hand, the standard price does not take into account any actual procurement costs, which can be a problem, for example, with externally procured materials with highly variable prices. For these reasons, SAP recommends the valuation of materials at the moving average price only in the case of raw materials and trading goods. For semifinished and finished products, you should choose valuation at the standard price.

**Price Control with and Without Actual Costing - SAP**
Total of the balance of the price difference accounts used in order settlement and actual costing is:-200 + 200 + 200 = 200 USD. Not zero even though all off the price differences were distributed to the inventory. SAP therefore recommends that customers who use the actual costing do not use the price difference split functionality. What does it mean?

**Production Variance Split and Material Ledger Actual ... - SAP**
I bought this on SAP Press website directly. This is a very nicely written book, and in a very easy to understand manner. The way the whole concept is developed from Standard Prices Variances, MAP price variances and the subsequent need to have actual costing is super. ML config, actual costing, reval, advanced concepts etc, is just brilliant.
