Apache Oozie is a workflow scheduler for Hadoop. It is a system which runs the workflow of dependent jobs. Here, users are permitted to create Directed Acyclic Graphs of workflows, which can be run in parallel and sequentially in Hadoop.

The Workflow Engine is based on time and data triggers. It can continuously run workflows based on time (e.g. run it every hour), and data availability (e.g. wait for my input data to exist before running my workflow). Oozie v1 is a server based Workflow Engine specialized in running workflow jobs with actions that execute Hadoop Map/Reduce and Pig jobs.
