DIFFERENTIATION OF TRIGONOMETRY FUNCTIONS. In the following discussion and solutions the derivative of a function  $h(x)$  will be denoted by  $h'(x)$ . The following problems require the use of these six basic trigonometry derivatives : These rules follow from the limit definition of derivative, special limits,

## **Differentiation Formula for Trigonometric Functions**

The six trigonometric functions also have differentiation formulas that can be used in application problems of the derivative. The rules are summarized as follows: 1. If  $f(x) = \sin x$ , then  $f'(x) = \cos x$ . 2. If  $f(x) = \cos x$ , then  $f'(x) =$

finding the derivative of a trigonometric function, or its rate of change with respect to a variable. For example, the derivative of the sine function is written  $\sin' = \cos$ , meaning that the rate of change of  $\sin$  at a particular angle  $x = a$  is given by the cosine of that angle. All derivatives of circular trigonometric functions can be found from those of  $\sin$
