These ideal conditions are rarely met with on actual roads; hence, the theoretical capacities are never realised. (According to HCM, the theoretical capacity under ideal conditions ranges from 2800 PCU/hour (total in both directions for a two-way, two-lane highway) to 2200 per lane with free speeds of 100km/h for multi-

significant additions to the new 6th Edition of the Highway Capacity Manual (HCM) are equations to account for the effects of work zones. Based on NCHRP Report 03-107, reduction factors have been developed to reduce capacity, free flow speed, and saturation flow rates in four of the analysis modules.

Highway Capacity Manual in Planning

- The HCM is commonly used to evaluate current or forecast roadway operations
- The HCM can also reliably and cost-effectively support:
 - Planning efforts
 - Programming decisions
 - Performance monitoring
 - Roadway management
- But how well is it used for planning? 7
