Triphenylphosphine (TPP) is a standard reagent in organic synthesis, although the by-product triphenylphosphine oxide often complicates purification of the reaction mixture. The use of polymer-supported triphenylphosphine (poly-TPP) leads to much simpler workups and product isolations.

Solid-Supported Reagents in Organic Synthesis

Reagents may be compounds or mixtures. In organic chemistry, most are small organic molecules or inorganic compounds. Examples of reagents include Grignard reagent, Tollens' reagent, Fehling's reagent, Collins reagent, and Fenton's reagent. However, a substance may be used as a reagent without having the word "reagent" in its name.
